

WORK MANAGEMENT, SIMPLIFIED

Software that ships. Software that's used.

Comniwork is a work management app for small teams. Kanban boards, recurring tasks, notes, calendar, and notifications — designed, built, and operated as one product.

Built for teams of 3–15

Web · iOS · Android (PWA)

Dark mode native

FOR

Forward-thinking teams

WHAT IS COMNIWORK?

One place for the work your team actually does.

Most small teams juggle five tools to run a single project — a board here, a doc there, a calendar somewhere else, a Slack DM for the recurring stuff. Comniwork is the opposite: one app where boards, recurring tasks, notes, calendar, and notifications live together and stay in sync.

THE PROBLEM

Tool sprawl. Half the team lives in Trello, half in Notion, recurring work gets re-typed every Monday, and nobody knows what's actually due today.

THE FIX

One workspace. Flat permissions. Recurring tasks that actually recur. Notes that link to cards. A dashboard that knows what's yours and what's overdue.

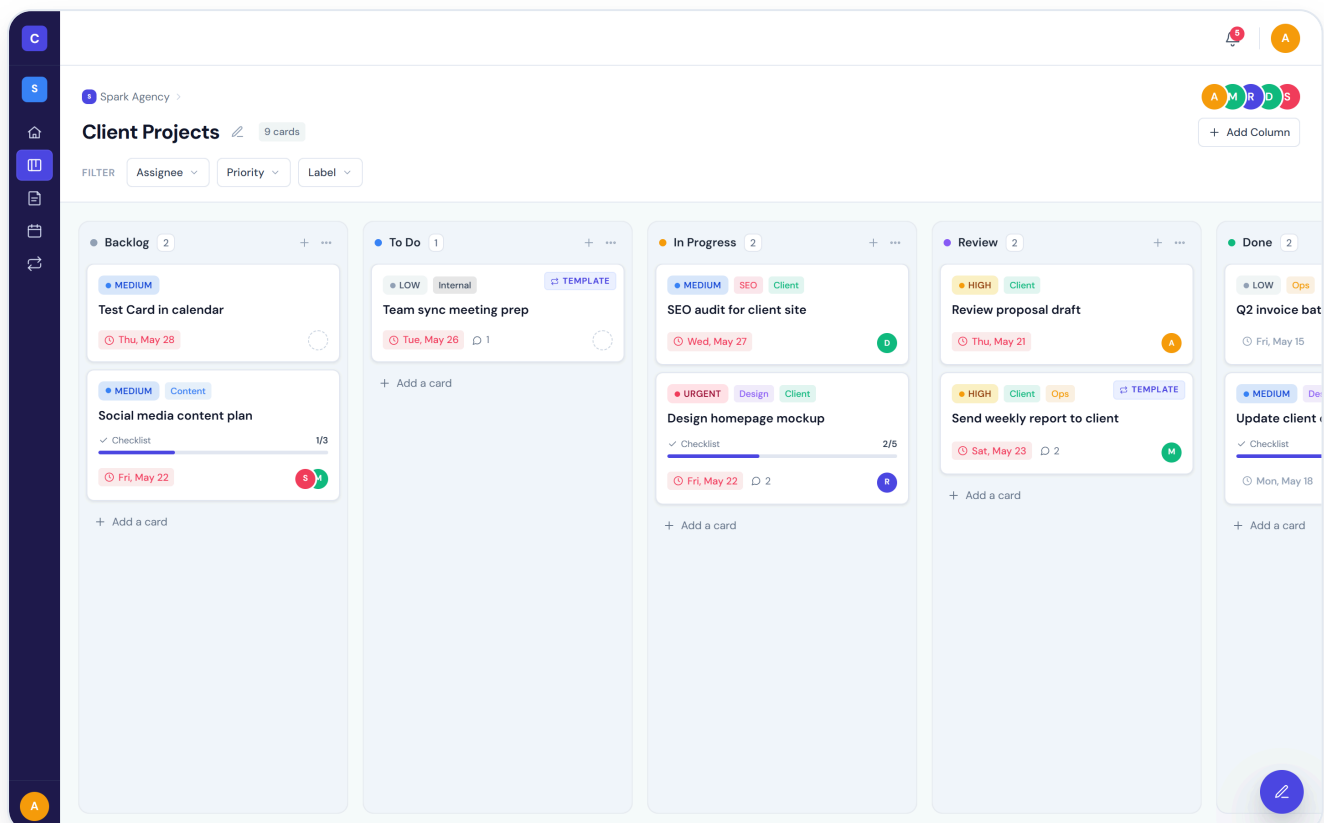

WHAT'S INSIDE

-  **Kanban boards**
Drag-and-drop boards with real-time sync. Custom columns, filters, and search per board.
-  **Notes & docs**
Rich-text Tiptap editor with folders, pinning, and links back to boards and cards.
-  **Notifications**
Assigned, mentioned, due-soon, overdue, moved-to-done. Click straight to the card.
-  **Recurring tasks**
Daily, weekly, monthly, or every-Monday rules. Fresh cards auto-create, fully assigned, on the right date.
-  **Calendar**
Month view of every due date across every board, with priority colors and overdue highlighting.
-  **Personal dashboard**
My tasks across every workspace, with stats and an overdue/due-this-week split.

BOARDS

Drag-and-drop kanban that keeps the team in sync.

A board per project. Columns you control. Cards that move with a drag and stay in sync for everyone, instantly.

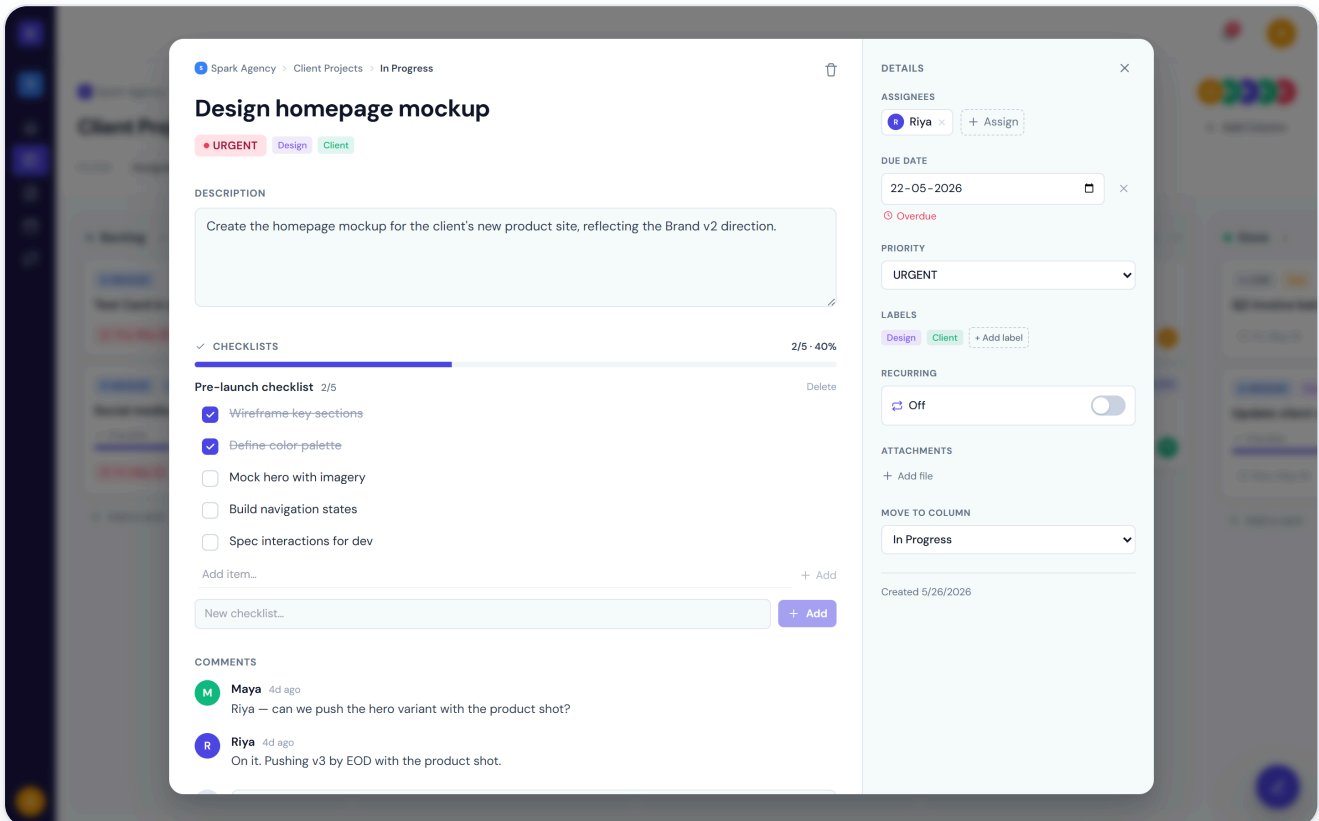

- Custom columns & colors per board
- Real-time updates — no refresh needed
- Search inside a board
- Drag cards across columns; drag columns to reorder
- Filter by assignee, priority, label, due date
- Quick-add cards from the column footer

CARDS

Every detail on the card. Nothing buried.

Open a card and see the whole story: who's on it, what's left, what changed, what people said.

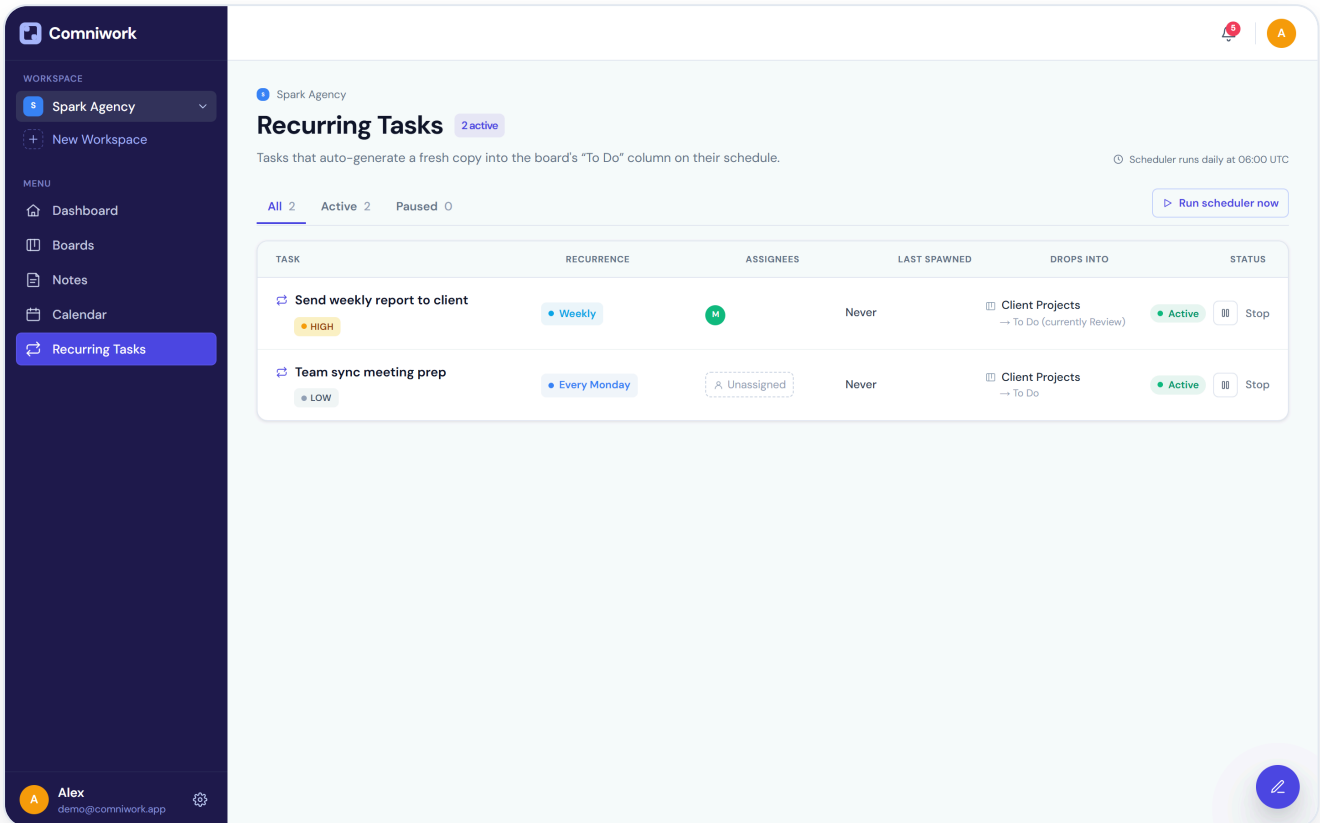

- Multiple assignees from the workspace
- Custom labels per workspace
- File attachments via Supabase Storage
- Activity log — who did what, when
- Priority: low · medium · high · urgent
- Checklists with live progress
- Comments with @mentions
- Tiptap rich-text description

TOP-PRIORITY FEATURE

Recurring tasks that actually recur.

Stop re-typing Monday's checklist every Monday. Mark a card recurring once and Comniwork creates the next copy at the right time — fully assigned, ready to go.

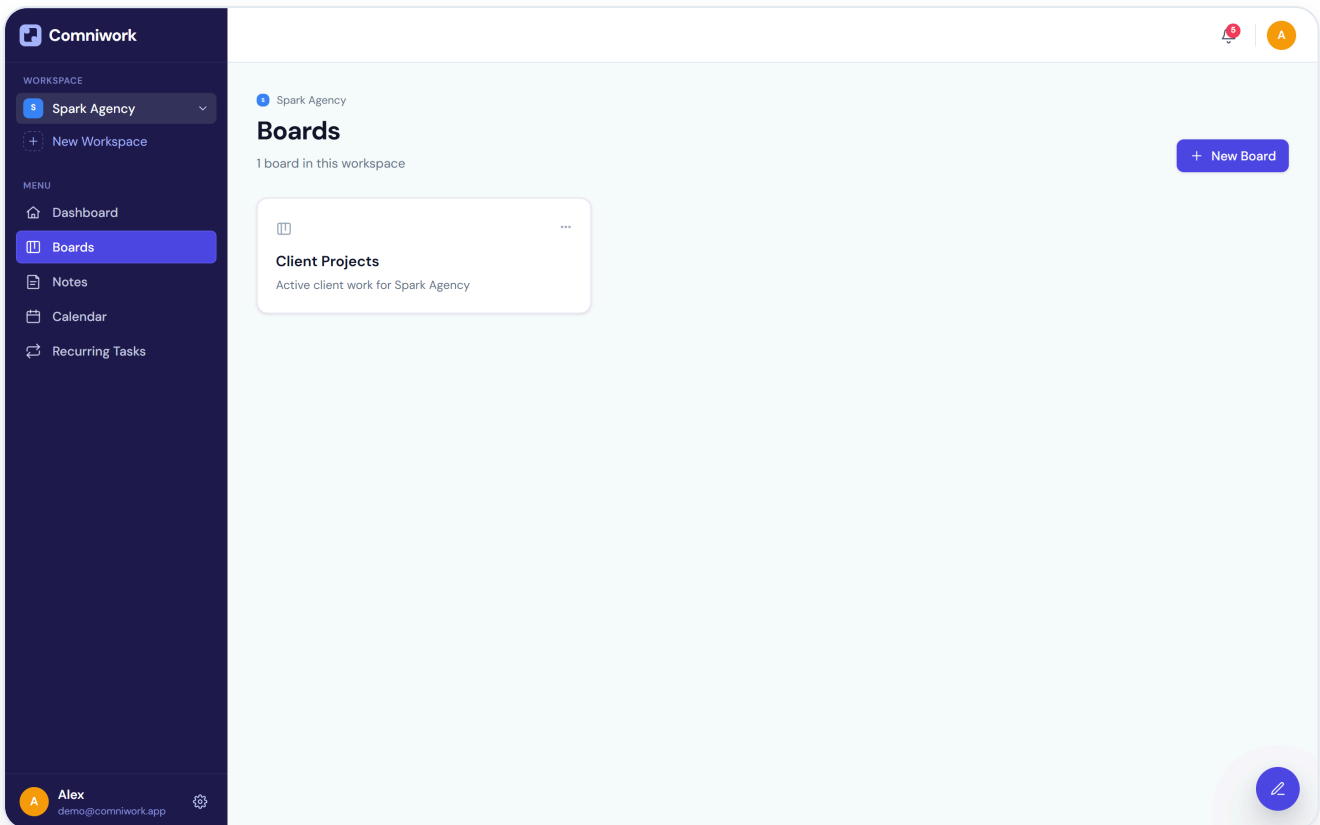

- Daily · Weekly · Bi-weekly · Monthly
- 1st-of-the-month rule
- 📅 badge on every recurring card
- Dedicated 'Recurring' management view
- Every-Monday (or any weekday)
- Auto-creates with the same assignees
- Pause / resume without deleting the template
- Default target column: To Do

DOCUMENTATION

The team wiki, right next to the boards.

A rich-text notes module per workspace. Organize in folders, pin the important stuff to the top, and link notes to the cards they describe.

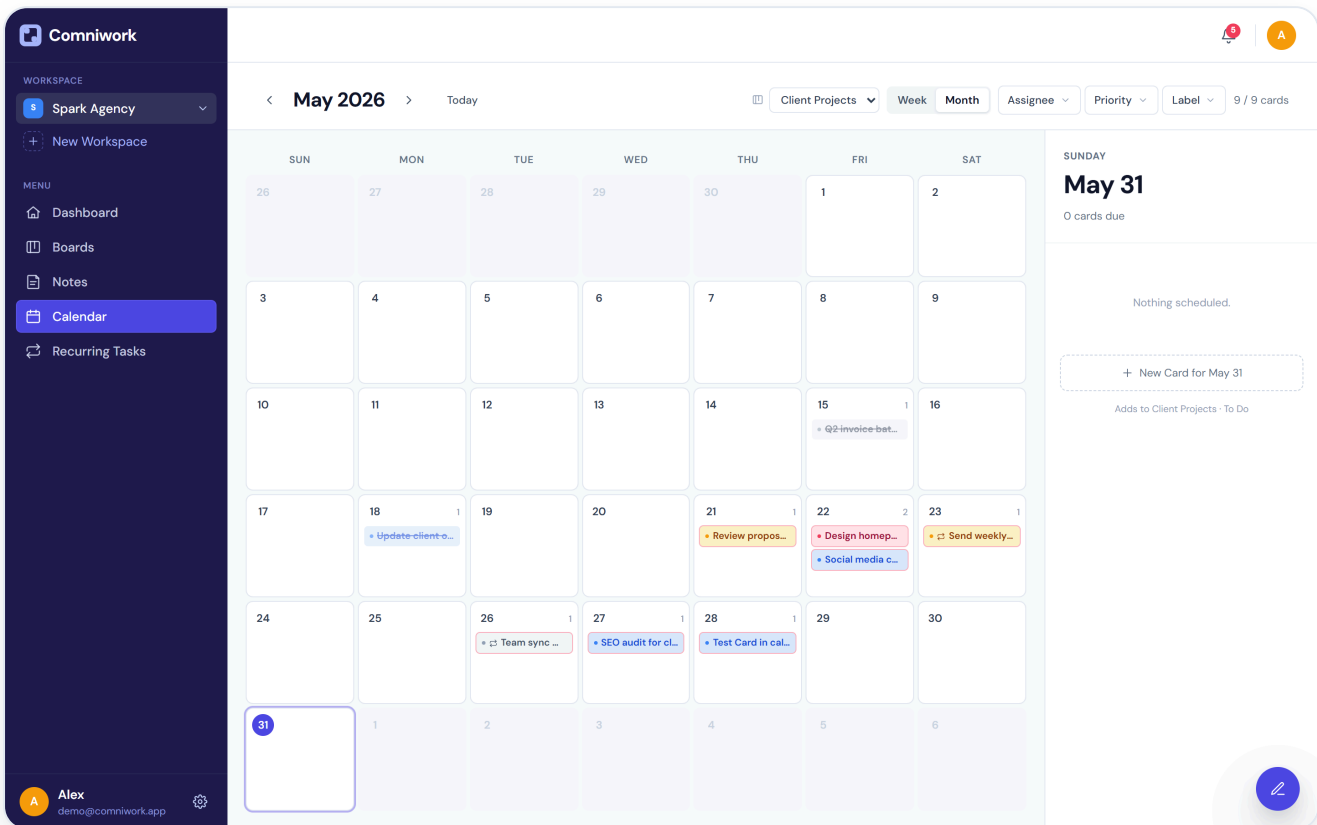

- Tiptap editor: headings, lists, tables, code
- Folder organization per workspace
- Pin notes to the top
- Link a note to a board or a card
- Author + last-edited timestamps
- Mobile-optimized editor

PLANNING

Every due date, one calendar.

A month view of every card with a due date, across every board in the workspace.
Priority-colored, overdue-highlighted, click-to-add.

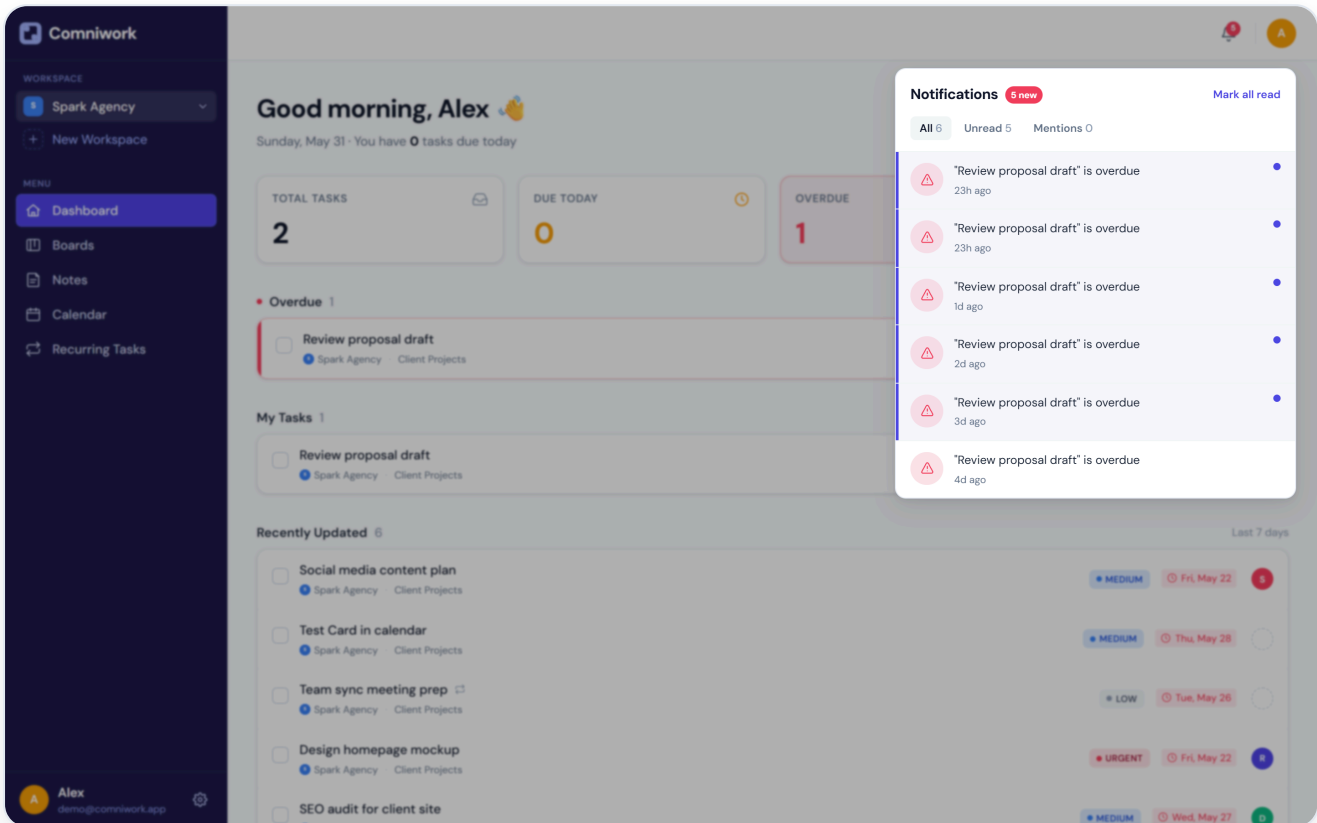

- Month view across all boards
- Click any date to add a card
- Today is highlighted
- Color coded by priority
- Side panel: cards on the selected day
- Overdue cards rendered in rose

STAY IN THE LOOP

The right ping, at the right time.

An in-app notification center that surfaces only what affects you — and a one-click jump straight to the card that needs you.

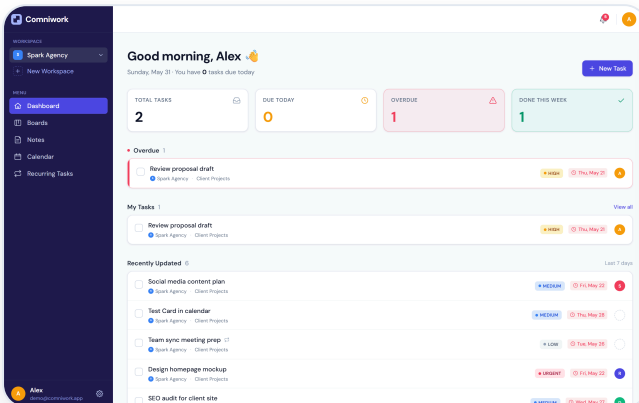

- Assigned to a card
- Card due within 24 hours
- Your card moved to Done
- Mark one or all as read
- Mentioned in a comment
- Card now overdue
- Unread badge in the top bar
- Each notification deep-links to its card

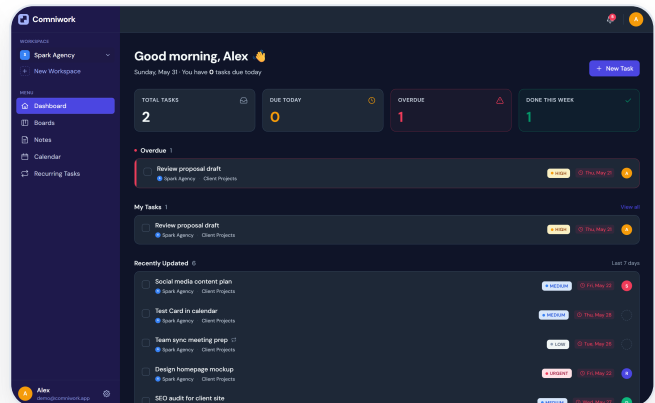

DASHBOARD

A home screen that knows what's yours.

Comniwork greets every user with their own dashboard — tasks across every workspace they belong to, stats for the week, and a clean split between what's overdue, what's due soon, and what just moved.

Light mode

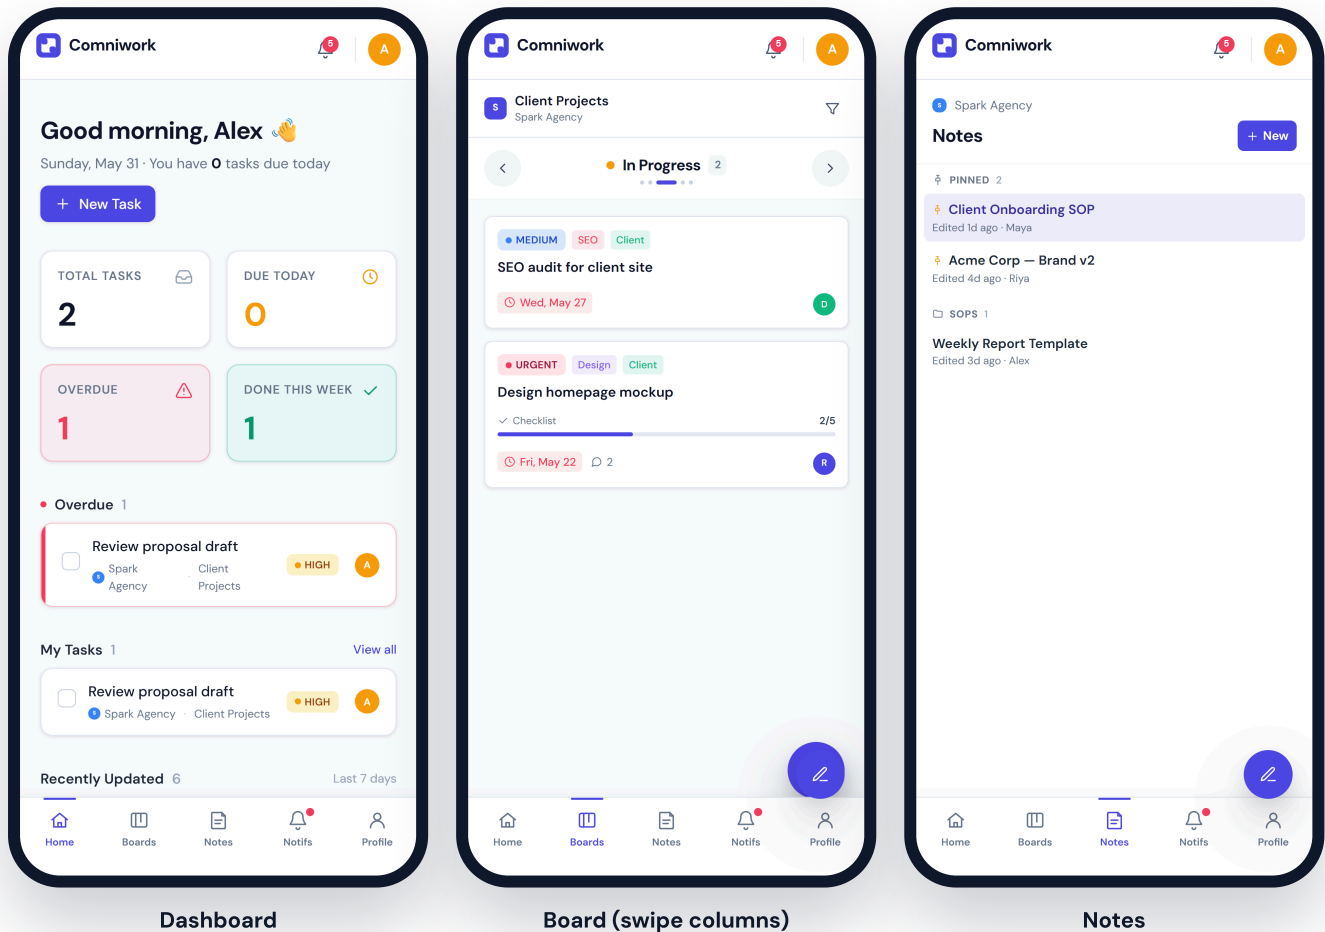

Dark mode

- Greeting that adapts to the time of day
- My tasks — across every workspace
- Due-this-week and recently-updated rails
- Stats: total, due today, overdue, completed this week
- Overdue section in rose, hard to ignore
- Dark mode is native, not retrofitted

ANYWHERE

A full mobile experience — no app install.

Comniwork is a PWA. Add it to the home screen on iOS or Android and you get a fast, full-screen app with bottom navigation, swipeable kanban columns, and a floating + button for quick card capture.

- Bottom nav: Dashboard · Boards · Notes · Notifications · Profile
- Floating action button for quick card capture
- One column visible at a time, swipe to the next
- Large tap targets — built mobile-first

WHY COMNIWORK

Designed for small teams. On purpose.

Comniwork isn't a generalist tool with 200 toggles for enterprise. It's a focused product for the way 5-person teams actually work.

01 / Flat permissions

No roles, no permission matrix.

Every member of a workspace can do everything. No admin bottlenecks, no "can you make me an editor", no role audits. Membership = full access.

02 / Built for shipping

Boring, proven stack. Owned by you.

Next.js, TypeScript, Postgres, Prisma, Supabase, Vercel. Code lives in your GitHub org from day one — no lock-in, no proprietary runtime.

03 / Recurring as a first-class feature

The weekly grind, on autopilot.

Comniwork was designed around recurring work. Templates fire on schedule, with the right assignees, in the right column — every time.

04 / Mobile + dark mode, native

Looks right on day one.

Responsive from the first commit. Dark mode is a theme-aware ramp, not a retrofit. The PWA installs in one tap, no app-store dance.

PRIORITY PALETTE, APPLIED THROUGHOUT

LOW

MEDIUM

HIGH

URGENT

WHO'S IT FOR

Four teams Comniwork was built around.

Each persona below maps to features Comniwork already ships. No roadmap promises — these workflows work today.

CASE 01**Agencies & consulting teams**

One workspace per client. Boards for active engagements, recurring "weekly standup" and "monthly report" cards, notes for runbooks. Calendar for the whole account.

CASE 02**Founding teams**

A single product workspace with boards for engineering, growth, and ops. Notes for specs and decisions. Recurring tasks for the weekly metrics review.

CASE 03**Internal ops & back-office**

Recurring close-out checklists, vendor renewals on the 1st of every month, notes that double as SOPs. Notifications keep nothing from slipping.

CASE 04**Creative & content teams**

A board per channel, cards per piece, checklists for production steps, calendar that becomes your editorial calendar by accident.

UNDER THE HOOD

A boring, proven stack. On purpose.

Nothing exotic. Every choice in Comniwork's stack is one you could hire for tomorrow, deploy in five minutes, and still be running in five years.

Next.js 14 App Router	TypeScript End-to-end	PostgreSQL Via Supabase	Prisma ORM
Supabase Auth Sessions	Supabase Storage Attachments	Tailwind CSS Design system	Tiptap Rich text
@dnd-kit Drag & drop	next-themes Dark mode	Vercel Hosting	Sonner Toasts

Operational posture

- Owned-by-you: code lives in your GitHub org from day one
- Deploys to your Vercel + your Supabase project
- Mobile-first responsiveness from the first component
- No AI slop, no architectural astronauts

Engagement model

- 1–2 week discovery sprint: scope, risk, price
- Fixed-scope build (4–16 weeks) or weekly retainer
- Small scopes welcome: 2–4 week single-feature gigs
- Operations & on-call after launch

GET IN TOUCH

Let's build the thing your team actually needs.

Try Comniwork live, or get in touch about something custom for your team. I reply within one business day.
